

S&DS 365 / 665  
**Intermediate Machine Learning**

# **Course Overview**

Wednesday, August 30

# Outline

- Overview of course
- Topics
- Syllabus and logistics

# Course objectives

Gain a solid understanding of concepts and methods of modern machine learning

- Become comfortable with the core ideas
- Gain an understanding of:
  - ▶ How and why methods work (and often don't!)
  - ▶ Which models are appropriate for a given problem
  - ▶ How to adapt and extend methods when needed
- Get close to the research frontier

# What does “Intermediate” imply?

- A second course in machine learning
- Assume familiar with things like PCA, bias/variance, maximum likelihood, basics of neural nets
- Have experimented with basic ML methods on some data sets
- Previous exposure to Python
- More on this later...

# What's the difference between 265 and 365?

- Little overlap in topics
- IML is more technical/mathematical than iML
- We'll do some theory (but not for theory's sake!)
- The courses have similar organization (lectures, demos, assignments...)
- IML is required for S&DS majors (BS); iML aims to be accessible to broad cross-section of Yale students
- More on differences later...

# Course materials

Materials posted to <http://interml.ydata123.org>; sometimes to Canvas

iML page: <https://ydata123.org/fa22/introml/calendar.html>

Please use Ed Discussion for any questions about lectures, homework, etc.

Please use email for questions about grading and grades.

# What is Machine Learning?

The study of algorithms and statistical models to develop computer programs that improve with experience.

# What is Machine Learning?

Machine Learning is closely aligned with Statistics, but with a focus on computation, scalability, prediction, representation, and complex problems

- Speech recognition
- Machine translation
- Object recognition and scene classification
- Autonomous driving...

Subproblems of these and other complex problems are concrete, statistical estimation and inference problems that can be studied in isolation.

# AI vs. ML

Machine learning focuses on making predictions and inferences from data.

AI combines machine learning components into a larger system that includes a decision making component.

*An AI system exhibits a behavior, resulting from the collective decisions that are made.*

# Machine Learning and AI

The focus in AI courses in the computer science curriculum used to be very different:

- Logic
- Search
- Games

Now much more “core” ML material than can be fit in a one semester course.

# Machine learning frameworks

- Supervised learning
- Unsupervised (and semi-supervised) learning
- Reinforcement learning
- Representation learning

# Deep learning is a type of machine learning

- Heuristics motivated from simplified view of the brain
- A particular form of nonlinear classification/regression/density estimation

# This course

- Part 1: Supervised learning
- Part 2: Unsupervised learning
- Part 3: Reinforcement learning
- Part 4: Sequence learning

# Machine learning *modus operandi* (1/2)

Increasingly powerful computing platforms (Keras, Tensorflow, Pytorch) implementing a few standard architectures.

## Machine learning *modus operandi* (2/2)

More challenging to design and implement. Computation typically not “off the shelf”

# Logistics

# IML Team

- Instructor: John Lafferty
- Teaching Fellows
  - Zehao Dou (PhD student, S&DS)
  - Ruixiao Wang (PhD student, S&DS)
  - Chris Xu (PhD student, S&DS)
- ULAs
  - Varun Varanasi
  - Andy Wang
- Course Manager
  - Baijia Xu

# Syllabus

*Intermediate Machine Learning* is a second course in machine learning at the advanced undergraduate or beginning graduate level. The course assumes familiarity with the basic ideas and techniques in machine learning, for example as covered in S&DS 265. The course treats methods together with mathematical frameworks that provide intuition and justifications for how and when the methods work. Assignments give students hands-on experience with machine learning techniques, to build the skills needed to adapt approaches to new problems.

# Syllabus

Topics include nonparametric regression and classification, kernel methods, risk bounds, nonparametric Bayesian approaches, graphical models, attention and language models, generative models, sparsity and manifolds, and reinforcement learning. Programming is central to the course, and is based on the Python programming language and Jupyter notebooks.

# Prerequisites

- Background in probability and statistics, at the level of S&DS 242 (Theory of Statistics)
- Familiarity with the core ideas from linear algebra, for example through Math 222 (Linear Algebra with Applications)
- Computational skills at the level of S&DS 265 (Introductory Machine Learning) or CPSC 200 (Introduction to Information Systems)
- Previous familiarity with Python is recommended

# Installing Jupyter

- See installation guide on course Canvas site: Files > Getting started
- Use Python 3.x version

# Assessment

- Assignments (50%)
- Mid-semester exam (20%)
- Final exam: 20%
- Quizzes (10%)

Assignments due on a Wednesday at midnight. Late assignments not accepted.

# Assignments

- Five assignments total
- Roughly every 2 weeks
- Due at 11:59pm on a Wednesday
- Late assignments not accepted
- Submitted using Gradescope
- Mix of concepts, problem solving and data analysis
- Prepared using Python notebooks

# Collaboration

Collaboration on homework assignments with fellow students is encouraged. However, such collaboration should be clearly acknowledged, by listing the names of the students with whom you have had any discussions concerning the problem. *You may not share written work or code—after discussing a problem with others, the solution must be written by yourself.*

# Quizzes

- Five quizzes total
- Taken online (Canvas)
- Short, 10-20 minutes
- Assess understanding of essentials

			Resources	Topics		
12	Nov 13, 15	Sequential models	 <a href="#">vanilla RNN</a>  <a href="#">Fakespeare</a> <a href="#">GRU</a>	<b>Mon:</b> HMMs and RNNs <b>Wed:</b> RNNs, GRUs, LSTMs, and all that	<a href="#">TensorFlow: Text generation</a> <a href="#">Notes on HMMs and Kalman filters</a> PML Chapter 15	Assn 4 in  Assn 5 out
13	Nov 20, 22	No class, Thanksgiving break				
14	Nov 27, 29	Sequence-to-sequence models and Transformers	 <a href="#">GPT-3 demo</a>  <a href="#">Codex demo</a>	<b>Mon:</b> Sequence-to-sequence models <b>Wed:</b> Attention and transformers	<a href="#">Notes on mixtures</a> PML Sections 15.4, 15.5	<a href="#">Quiz 5</a>
15	Dec 4, 6	Transformers Societal issues	 <a href="#">Transformer demo</a>	<b>Mon:</b> Transformers and AI/ML ethics <b>Wed:</b> Course wrap up		Assn 5 in
17	Wed Dec 20, 9am, Room TBA	Final exam			Practice exams	<a href="#">Registrar: final exam schedule</a>

# Exams

- Midterm: Monday, October 16, in class
- Final: Wednesday Dec. 20, 9:00am

# Auditing

- Auditors are welcome!
- Full access to Canvas
- Just expected to regularly attend class

**Questions on logistics?**

# Topics covered

- Part 1: Supervised learning
- Part 2: Unsupervised learning
- Part 3: Reinforcement learning
- Part 4: Sequence learning

# Topics covered

- *Part 1: Supervised learning*
  - ▶ Sparse regression
  - ▶ Smoothing and kernels
  - ▶ (Convolutional) neural networks
  - ▶ Risk bounds and generalization error
- Part 2: Unsupervised learning
- Part 3: Reinforcement learning
- Part 4: Sequence learning

# Topics covered

- Part 1: Supervised learning
- *Part 2: Unsupervised learning*
  - ▶ Nonparametric Bayes
  - ▶ Approximate inference
  - ▶ Approaches to generative models
  - ▶ Structure learning
- Part 3: Reinforcement learning
- Part 4: Sequence learning

# Topics covered

- Part 1: Supervised learning
- Part 2: Unsupervised learning
- *Part 3: Reinforcement learning*
  - ▶ Deep Q-Learning
  - ▶ Policy gradient methods
  - ▶ Actor-Critic approaches
- Part 4: Sequence learning

# Topics covered

- Part 1: Supervised learning
- Part 2: Unsupervised learning
- Part 3: Reinforcement learning
- *Part 4: Sequence learning*
  - ▶ Classical techniques (Kalman filters, HMMs)
  - ▶ LSTMs and GRUs
  - ▶ Attention and language models
  - ▶ Transformers
